

# Technical specification for Small Form Factor Pluggable (SFP)

OC-48 (2488.32Mbps)

Sumitomo Part Number Function

SCP6G28-GL-# W E SR, 1310nm, 2km

SCP6G08-GL-# W E IR-1, 1310nm, 15km

## SUMITOMO ELECTRIC

Sumitomo Electric reserves the right to make changes in this specification without prior notice. Sumitomo Electric Industries, Ltd. and ExceLight Communications, Inc. have been granted license to the following patents under a license agreement with Finisar corporation: US5,019,769, US6,439,918 B1

**#Safety Precaution Symbols** This specification uses various picture symbols to prevent possible injury to operator or other persons or damage to properties for appropriate use of the product. The symbols and definitions are as shown below. Be sure to be familiar with these symbols before reading this specification.

⚠ Caution Wrong operation without following this instruction may lead to human injury or property damage.

**Marning** Wrong operation without following this instruction may lead to human death or serious injury.

Examples of picture symbols

indicates prohibition of actions. Action details are explained thereafter.

indicates compulsory actions or instructions. Action details are explained thereafter.

#### 1 General

Features and applications of SCP6G28/SCP6G08 are listed below.

## **Features**

- \* RoHS-6 Compliant.
- \* Compliant with SFP MSA.
- \* SFF-8472 rev.9 compliant diagnostic monitoring implemented.
- \* Power Supply Voltage Single +3.3V
- \* Compact Package Size 57.5 X 13.9 X 8.6 mm
- \* Electrical Interface AC coupled for DATA, LVTTL for Tx Disable and open collector output for

LC Duplex

- LOS and Tx Fault. Circuit ground is internally isolated from frame ground.
- \* Connector Interface
- \* Serial ID Functionality
- \* Alarm and Warning Flags
- \* Bail type Actuator

#### 2 **Block diagram**

## Caution

O not disassemble this product. Otherwise, failure, electrical shock, overheating or fire may occur.

# 3 Package dimensions

Note1 All Dimensions in mm

Note2 Dimensions with parentheses indicate the bail and latch release position

Figure 2. Package dimensions

## 4 Pin assignment and function

Figure 3. Pin assignment

| Pin number | Name      | Function                     | Plug sequence* | Note                            |
|------------|-----------|------------------------------|----------------|---------------------------------|
| 1          | VeeT      | Transmitter ground           | 1              |                                 |
| 2          | TXFault   | Transmitter fault indication | 3              |                                 |
| 3          | TXDisable | Transmitter disable input    | 3              | Module disables on high or open |
| 4          | MOD-DEF2  | Module definition 2          | 3              | 2 wire serial ID and interface  |
| 5          | MOD-DEF1  | Module definition 1          | 3              | 2 wire serial ID and interface  |
| 6          | MOD-DEF0  | Module definition 0          | 3              | Grounded internally via 100ohm  |
| 7          | NUC       | No user connection           | 3              | Reserved for future use         |
| 8          | LOS       | Loss of signal indication    | 3              |                                 |
| 9          | VeeR      | Receiver ground              | 1              |                                 |
| 10         | VeeR      | Receiver ground              | 1              |                                 |
| 11         | VeeR      | Receiver ground              | 1              |                                 |
| 12         | RD-       | Negative receiver Data out   | 3              |                                 |
| 13         | RD+       | Positive receiver Data out   | 3              |                                 |
| 14         | VeeR      | Receiver ground              | 1              |                                 |
| 15         | VccR      | Receiver power               | 2              |                                 |
| 16         | VccT      | Transmitter power            | 2              |                                 |
| 17         | VeeT      | Transmitter ground           | 1              |                                 |
| 18         | TD+       | Positive transmitter Data in | 3              |                                 |
| 19         | TD-       | Negative transmitter Data in | 3              |                                 |
| 20         | VeeT      | Transmitter ground           | 1              |                                 |

<sup>\*</sup>Plug sequence: Pin engagement sequence during hot plugging.

**TxFault** TxFault is an open collector output that shall be pulled up with a 4.7k to 10kohm resistor on the host board. Pull up voltage is between 2.0V and VccT+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. TxFault is asserted when bias current of laser exceeds the factory-calibrated threshold level or when output power of transmitter degrades above/below the factory-calibrated threshold level.

**TxDisable** TxDisable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7kohm resistor.

MOD-DEF 0, 1 and 2 are module definition pins. They should be pulled up with a 4.7k to 10kohm resistor on the host board. The pull-up voltage shall be VccT. MOD-DEF0 indicates that the module is present. MOD-DEF1 is the clock line of two wire serial interface for serial ID. MOD-DEF2 is the data line of two wire serial interface for serial ID.

LOS is an open collector output that shall be pulled up with a 4.7k to 10kohm resistor. Pull up voltage between 2.0V and VccR+0.3V. Low indicates normal operation.

RD RD+/- are the differential receiver outputs. They are AC-coupled 100ohm differential lines that should be terminated with 100ohm (differential) at the user's SERDES. The AC coupling is done inside the module and is thus not required on the host board.

TD TD+/- are the differential transmitter inputs. They are AC-coupled, differential lines with 100ohm differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board.

Figure 4 SFP host board mechanical layout

Figure 5 Recommended bezel design

5 Absolute maximum ratings

| Parameter                                  | Symbol  | Min. | Тур. | Max.     | Unit  | Note |
|--|---------|------|------|----------|-------|------|
| Storage ambient temperature                | Ts      | -40  |      | 85       | deg.C | 1    |
| Operating case temperature                 | Tc      | -40  |      | 85       | deg.C |      |
| Optical input level                        | Pin     |      |      | 3.0      | dBm   |      |
| Supply voltage                             | VccT, R | 0    |      | 4.0      | V     |      |
| Input voltage                              | Vi      | 0    |      | VccT+0.3 | V     | 2    |
| Sink current                               | Isink   | -1   |      | 5        | mA    | 3    |
| Differential Input Voltage Swing (TD+,TD-) | Vin     |      |      | 2.5      | Vp-p  |      |

#### Note

- 1. No condensation allowed.
- 2. For MOD-DEF (1:2) and Tx Disable.
- 3. For LOS and TxFault.

## **Marning**

Use the product with the rated voltage described in the specification. If the voltage exceeds the maximum rating, overheating or fire may occur.

## **⚠** Caution

Do not store the product in the area where temperature exceeds the maximum rating, where there is too much moisture or dampness, where there is acid gas or corrosive gas, or other extreme conditions. Otherwise, failure, overheating or fire may occur.

## 6 Electrical interface

Unless otherwise specified, VccT, R=3.135 to 3.465V and all operating temperature shall be applied.

## 6.1 Operating characteristics

| Parameter         | Symbol  | Min.  | Тур. | Max.  | Unit | Note |
|-------------------|---------|-------|------|-------|------|------|
| Supply Voltage    | VccT, R | 3.135 | 3.30 | 3.465 | V    |      |
| Power Dissipation | Pw      |       |      | 1.0   | W    | 1    |

## Note

1. 2488.32Mbps, PRBS 2^23-1, NRZ, 50% duty cycle data.

## 6.2 Transmitter

| Parameter                      | Symbol  | Min.    | Тур. | Max. | Unit     | Note |      |
|--------------------------------|---------|---------|------|------|----------|------|------|
| Differential Input Voltage Swi | Vin     | 0.3     |      | 1.6  | Vpp      | 1    |      |
| Input Differential Impedance   |         | Zin     | 80   | 100  | 120      | ohm  |      |
| Tx Fault                       | High    | VfaultH | 2.0  |      | VccT+0.3 | V    | 2    |
| IX Fault                       | Low     | VfaultL | 0    |      | 0.8      | V    | 2, 3 |
| Tx Disable                     | Disable | Vdi     | 2.0  |      | VccT     | V    | 1    |
| IX DISABLE                     | Enable  | Vei     | 0    |      | 0.8      | V    | 4    |

#### Note

- 1. Refer to Figure 6.
- Tx Fault is pulled up to VccT with a 4.7k 10kohm resistor on the host board.When high, output indicates a laser fault of some kind. Low indicates normal operation.
- 3. Sink Current: 3mA
- 4. Tx Disable input is internally terminated to VccT via 7.5kohm resistor. If left open, transmitter is disabled.

## 6.3 Receiver

| Parameter                      | Symbol                                     | Min.    | Тур. | Max. | Unit     | Note |     |
|--------------------------------|--|---------|------|------|----------|------|-----|
| Differential output voltage sw | Differential output voltage swing(RD+,RD-) |         |      |      | 1.2      | Vp-p | 1   |
| Data Rise / Fall Time          |  | tr / tf |      |      | 200      | ps   | 2   |
| LOS                            | High                                       | Vloh    | 2.0  |      | VccR+0.3 | V    | 3   |
| Output Voltage                 | Low  | VIol    | 0    |      | 0.8      | V    | 3,4 |

### Note

- 1. Rdiff=100ohm. Refer to figure 6.
- 2. 20-80% value.
- $3.\ LOS$  should be pulled up to VccR with a 4.7k-10kohm resistor on the host board. Low indicates normal status.
- 4. Sink current 3mA.

Differential Input / Output Voltage Swing (Vin / Vout) = 2 X Vswing

Figure 6. Definition of differential input/output voltage swing

## 6.4 Module definition

| Parameter      |      | Symbol | Min. | Тур. | Max. | Unit | Note |
|----------------|------|--------|------|------|------|------|------|
| MOD_DEF(1:2)   | High | Vih    | 2.0  |      | VccT | V    | 1    |
| Input Voltage  | Low  | Vil    | 0    |      | 0.8  | V    | I    |
| MOD_DEF(2)     | High | Voh    | 2.0  |      | VccT | V    | 1    |
| Output Voltage | Low  | Vol    | 0    |      | 0.8  | V    | 1    |

## Note

1. Should be pulled up to VccT with a 4.7k – 10kohm resistor on the host board.

## 7 Optical interface

Unless otherwise specified, VccT, R=3.135 to 3.465V and all operating temperature shall be applied.

## 7.1 Transmitter

| Parameter                      | Symbol    |            | SCP6G28                | SCP6G08       | Unit  | Note |  |
|--------------------------------|-----------|------------|------------------------|---------------|-------|------|--|

## Note

- 1. BER = 1E-10.
- 2. Measured at 2488.32Mbps, PRBS2^23-1, NRZ

## 7.3 Transceiver timing characteristics

| Parameter             | Symbol     | Min. | Тур. | Max. | Unit | Note |
|-----------------------|------------|------|------|------|------|------|
| TxDisable assert time | t_off      |      |      | 10   | us   | 1    |
| TxDisable negate time | t_on       |      |      | 1    | ms   | 2    |
| Time to initialize    | t_init     |      |      | 300  | ms   | 3    |
| TxFault assert time   | t_fault    |      |      | 100  | us   | 4    |
| TxDisable to reset    | t_reset    | 10   |      |      | us   | 5    |
| LOS assert time       | t_loss_on  |      |      | 100  | us   | 6    |
| LOS de-assert time    | t_loss_off |      |      | 100  | us   | 7    |
| Serial ID clock rate  | -          |      |      | 100  | kHz  |      |

#### Note

- 1. Time from rising edge of TxDisable to when the optical output falls below 10% of nominal.
- 2. Time from falling edge of TxDisable to when the modulated optical output rises above 90% of nominal.

3. From power on or negation of TxFault using TxDisable.

- 4. Time from transmitter's fault condition to TxFault on.
- 5. Time to reset TxFault status.

- 6. Time from Loss of signal state to LOS assert.
- 7. Time from non-LOS state to LOS de-assert.

Figure 8. Transceiver timing charts

## 7.4 TxFault and Tx shutdown options

| Type | TxFault     | Tx shutdown on fault |  |  |
|------|-------------|----------------------|--|--|
| Α    | Latched     | No                   |  |  |
| В    | Not latched | No                   |  |  |
| С    | Latched     | Yes                  |  |  |

Figure 9. Part number identification for TxFault and Tx shutdown behavior

## **8 EEPROM memory contents**

The data can be read using the 2-wire serial CMOS EEPROM protocol of the Atmel AT24C01A or equivalent.

Figure 10. Digital diagnostic memory map

## 8.1. Serial ID (A0h)

## Note

- 1. Refer to the section 8-2.
- 2. Address 63 is a checksum of bytes 0 to 62.
- 3. Address 68 to 83 is vendor's serial number area.
- 4. Address 84 to 91 is date-code.
- 5. Address 95 is a checksum of bytes 64 to 94.
- 6. Diagnostic monitoring types are listed below.

| Address | Bit | Status | Description                                       |
|---------|-----|--------|---|
| 92      | 7   | 0      | Reserved for legacy diagnostic implementations.   |
| 92      | 6   | 1      | Digital diagnostic monitoring is implemented.     |
| 92      | 5   | 0      | and a marelling a librarie of                     |
| 92      | 4   | 1      | externally calibrated                             |
| 92      | 3   | 1      | Receiver power measurement type. 1=Average power. |
| 92      | 2   | 0      | Address change is not required.                   |
| 92      | 1   | 0      | Reserved  |
| 92      | 0   | 0      | Reserved  |

7. Enhanced options are listed below.

| Address | Bit | Status | Description  |  |  |  |
|---------|-----|--------|--|--|--|--|
| 93      | 7   | 1      | Alarm/warning flags implemented for all monitored quantities |  |  |  |
| 93      | 6   | 1      | Soft TxDisable control is implemented.                       |  |  |  |
| 93      | 5   | 1      | Soft TxFault monitoring is implemented.                      |  |  |  |
| 93      | 4   | 1      | Soft RxLOS monitoring is implemented.                        |  |  |  |
| 93      | 3   | 0      | Soft rate-select control and monitoring is not implemented.  |  |  |  |
| 93      | 2   | 0      | Reserved   |  |  |  |
| 93      | 1   | 0      | Reserved   |  |  |  |
| 93      | 0   | 0      | Reserved   |  |  |  |

## 8.3 Real-time diagnostics (A2h)

Setting of bit 6, address 92 means digital diagnostic monitoring is implemented. Two calibration options are possible. If bit 5 of address 92,"Internally calibrated", is set, the transceiver directly reports calibrated values in units of current, power etc. If bit 4, "Externally calibrated", is set, the reported values are A/D counts which must be converted to real world units using calibration values read using 2 wire serial address 1010001X(A2h) from bytes 55 to 95. Monitoring range and accuracy are described in section 8.4.

| Address | Bit | Name                           | Description   |  |  |
|---------|-----|--------------------------------|---|--|--|
| 96      | MSB | Temperature (T <sub>AD</sub> ) | Junction temperature of the point illustrated in section 3. |  |  |
| 97      | LSB | Temperature (TAD)              | 16-bit signed 2's complement value. See Note 1 and 6.       |  |  |
| 98      | MSB | V(00 ()/)                      | Internally measured supply voltage "VccT" in a module.      |  |  |
| 99      | LSB | VCC (VAD)                      | Unsigned 16-bit value. See Note 2 and 6.                    |  |  |
| 100     | MSB | Ty bigg current (L)            | Unsigned 16-bit value. See Note 3 and 6.                    |  |  |
| 101     | LSB | Tx bias current (IAD)          |   |  |  |

#### Note

5. RX power (0.1uW/digit) RP = RP4\*RP $_{AD}$  +RP3\*RP $_{AD}$  +RP2\*RP $_{AD}$  +RP1\*RP $_{AD}$ +RP0 (Ext. cal.)

## 6. Calibration constants(A2h) are listed below.

| o. Calibration co | Calibration Constants (A21) are listed below. |          |   |  |  |
|-------------------|---|----------|---|--|--|
| Address           | Bytes   | Name     | Description   |  |  |
| 56:59             | 4   | RP4      | Single precision floating-point calibration data. Byte 56 is MSB. |  |  |
| 60:63             | 4   | PR3      | Single precision floating-point calibration data. Byte 60 is MSB. |  |  |
| 64:67             | 4   | PR2      | Single precision floating-point calibration data. Byte 64 is MSB. |  |  |
| 68:71             | 4   | PR1      | Single precision floating-point calibration data. Byte 68 is MSB. |  |  |
| 72:75             | 4   | RP0      | Single precision floating-point calibration data. Byte 72 is MSB. |  |  |
| 76:77             | 2   | Islope   | Unsigned fixed-point calibration data. Byte 76 is MSB.            |  |  |
| 78:79             | 2   | loffset  | 16-bit signed 2's complement calibration data. Byte 78 is MSB.    |  |  |
| 80:81             | 2   | TPslope  | Unsigned fixed-point calibration data. Byte 80 is MSB.            |  |  |
| 82:83             | 2   | TPoffset | 16-bit signed 2's complement calibration data. Byte 82 is MSB.    |  |  |
| 84:85             | 2   | Tslope   | Unsigned fixed-point calibration data. Byte 84 is MSB.            |  |  |
| 86:87             | 2   | Toffset  | 16-bit signed 2's complement calibration data. Byte 86 is MSB.    |  |  |
| 88:89             | 2   | Vslope   | Unsigned fixed-point calibration data. Byte 88 is MSB.            |  |  |
| 90:91             | 2   | Voffset  | 16-bit signed 2's complement calibration data. Byte 90 is MSB.    |  |  |
| 92:94             | 3   | -        | Reserved  |  |  |
| 95                | 1   | -        | Checksum. Low order 8 bits of the sum at data address 0 to 94.    |  |  |

## 8.4 A/D accuracy and monitoring range

|                 | <u> </u>   |                  |       |       |         |
|-----------------|------------|------------------|-------|-------|---------|
| Parameter       | Accuracy   | Monitoring range |       | Unit  | Note    |
| . u.uoto.       | 710001009  | Min. Max.        |       |       | 11010   |

## Note

- Junction temperature. Specified at Vcc=3.3V.
   Specified by nominal value.
   At specified transmitter wavelength.

## 8.5 Optional status bit(A2h)

| Address | Bit | Name           | Description   |
|---------|-----|----------------|---|
| 110     | 0   | Data ready bar | Indicates transceiver has achieved power up and data is ready. Bit remains high until data is ready to be read. |

## 8.6 Alarm and Warning Flags(A2h)

| Address | Bit | Name                  | Description  |
|---------|-----|-----------------------|--|
|         | 7   | Temp High Alarm       | Set when temperature exceeds high alarm level.                 |
|         | 6   | Temp Low Alarm        | Set when temperature is below low alarm level.                 |
|         | 5   | Vcc High Alarm        | Set when measured internal voltage exceeds high alarm level.   |
| 112     | 4   | Vcc Low Alarm         | Set when measured internal voltage is below low alarm level.   |
| 112     | 3   | Tx bias High Alarm    | Set when TX bias current exceeds high alarm level.             |
|         | 2   | Tx bias Low Alarm     | Set when TX bias current is below low alarm level.             |
|         | 1   | Tx power High Alarm   | Set when TX output power exceeds high alarm level.             |
|         | 0   | Tx power Low Alarm    | Set when TX output power is below low alarm level.             |
|         | 7   | RX power High Alarm   | Set when received power exceeds high alarm level.              |
| 113     | 6   | RX power Low Alarm    | Set when received power is below low alarm level.              |
|         | 5:0 | Reserved              |  |
| 114     | 7:0 | Reserved              |  |
| 115     | 7:0 | Reserved              |  |
|         | 7   | Temp High Warning     | Set when temperature exceeds high warning level.               |
|         | 6   | Temp Low Warning      | Set when temperature is below low warning level.               |
|         | 5   | Vcc High Warning      | Set when measured internal voltage exceeds high warning level. |
| 116     | 4   | Vcc Low Warning       | Set when measured internal voltage is below low warning level. |
| 110     | 3   | Tx bias High Warning  | Set when TX bias current exceeds high warning level.           |
|         | 2   | Tx bias Low Warning   | Set when TX bias current is below low warning level.           |
|         | 1   | Tx power High Warning | Set when TX output power exceeds high warning level.           |
|         | 0   | Tx power Low Warning  | Set when TX output power is below low warning level.           |
|         | 7   | RX power High Warning | Set when received power exceeds high warning level.            |
| 117     | 6   | RX power Low Warning  | Set when received power is below low warning level.            |
|         | 5:0 | Reserved              |  |

| 38-39       | RX Power Low Warning  | dBm  | NA             | NA             |

## 9 Recommended interface circuit

Figure 11. Recommended interface circuit

Figure 12. Recommended supply filtering network

### 10. RoHS COMPLIANCY

Compliancy versus requirements contained inside the following reference document is guaranteed: "Directive 2002/95/EC of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment: from official journal of European Union (European Parliament and of the Council). This product is Compliant at RoHS-6/6 level and Contains no leaded solders.

## 11 Reliability test program

## 12 Laser safety

This product uses a semiconductor laser system and is a laser class 1 product acceptable FDA, complies with 21CFR 1040.10 and 1040.11. Also this product is a laser class 1 product acceptable IEC60825-1:2001.

If this product is used under conditions not recommended in the specification or this product is used with unauthorized revision, classification for laser product safety standard is invalid. Classify the product again at your responsibility and tale appropriate actions.

## 13 Other precaution

Under such a strong vibration environment as in automobile, the performance and reliability are not guaranteed. The governmental approval is required to export this product to other countries. To dispose of these components, the appropriate procedure should be taken to prevent illegal exportation.

This module must be handled, used and disposed of according to your company's safe working practice.

# 

Operating transceiver products can have an outer package temperature exceeding 70 degC. To reduce the risk of injury from burns, do not touch the transceiver module under any circumstances while it is operational. When installing or uninstalling products that have been operating, handle with extreme care.

C; maximum number of failure allowed to pass the test.
